

State-of-the-Art Asset Management Tool

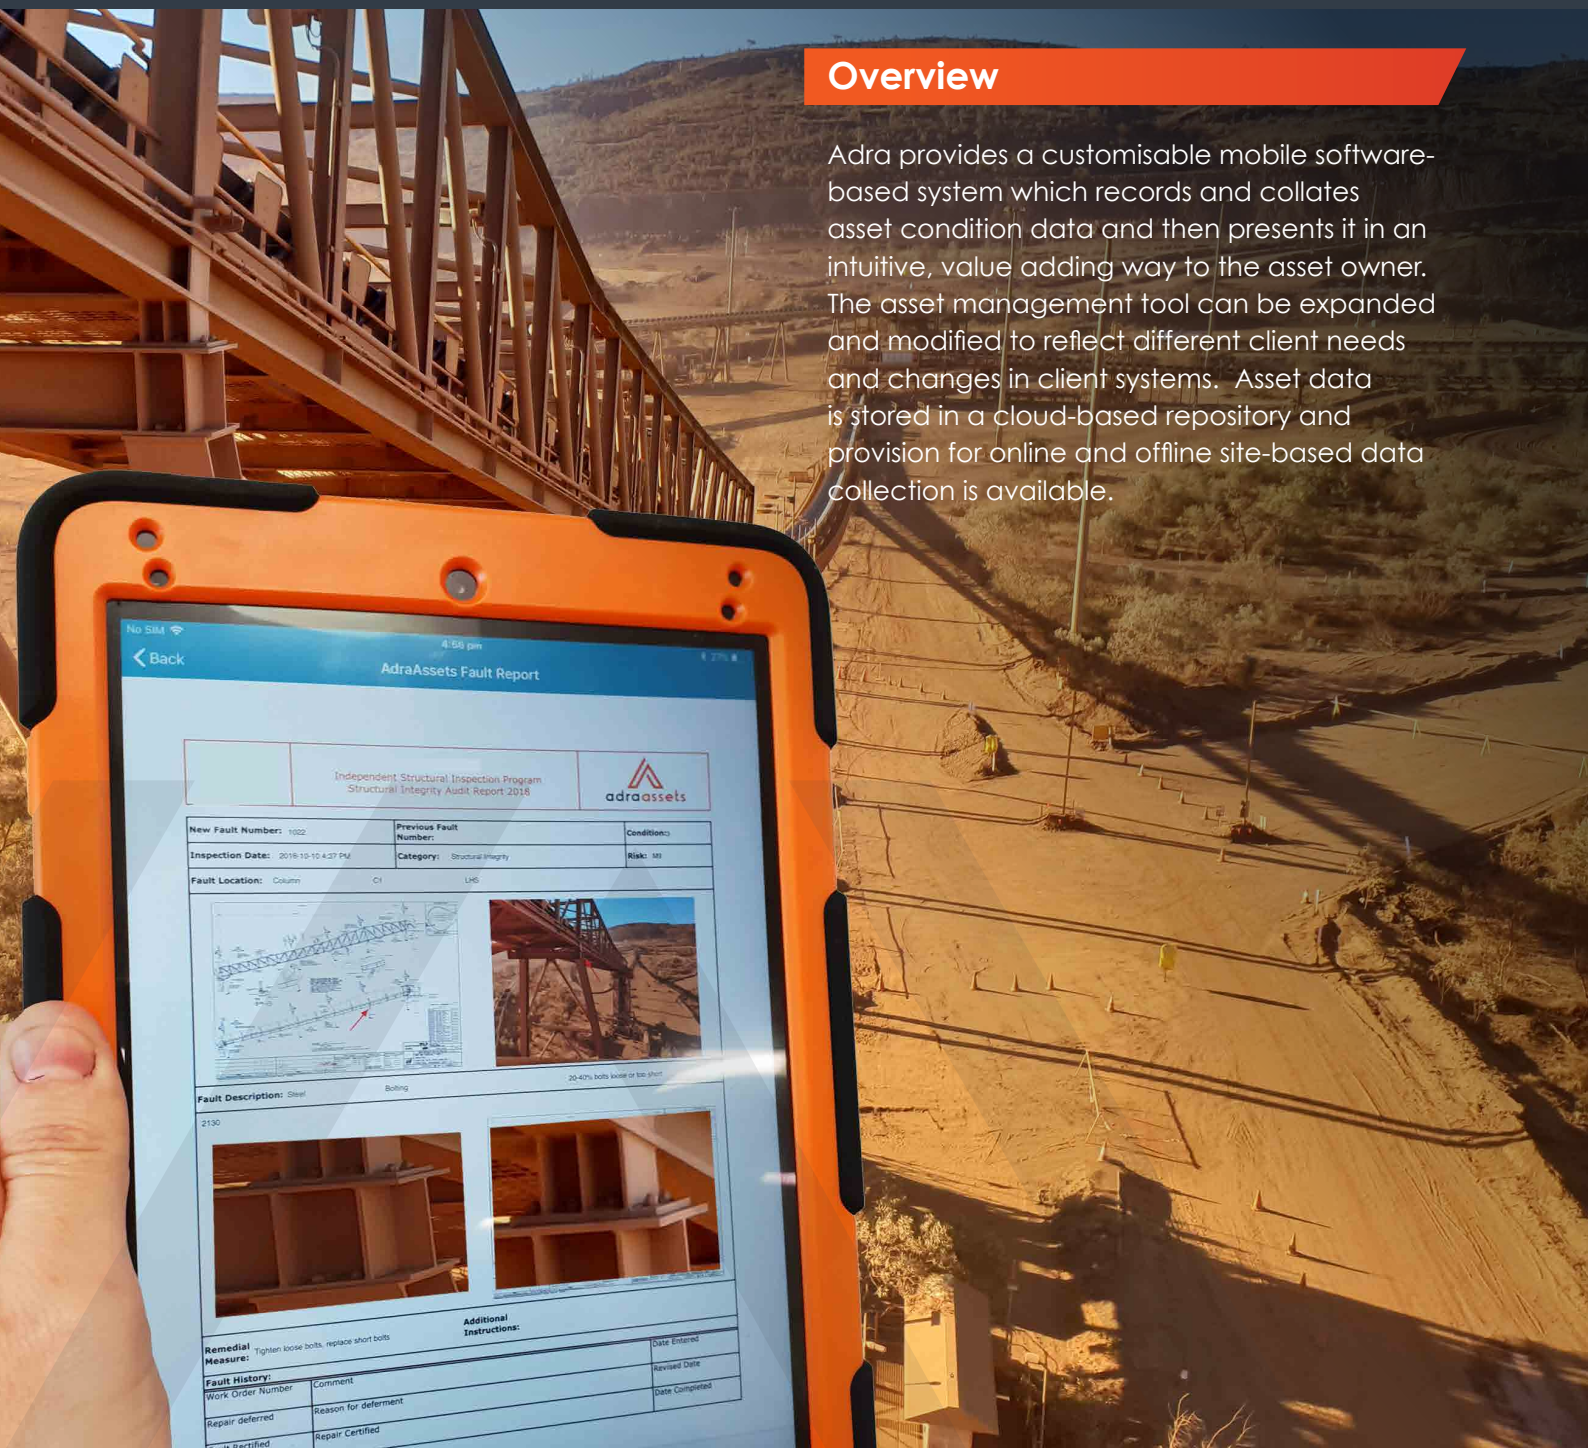

CAPABILITY STATEMENT

Comprehensive asset management solution for all equipment and infrastructure owners

Overview

Adra provides a customisable mobile software-based system which records and collates asset condition data and then presents it in an intuitive, value adding way to the asset owner. The asset management tool can be expanded and modified to reflect different client needs and changes in client systems. Asset data is stored in a cloud-based repository and provision for online and offline site-based data collection is available.

STATE-OF-THE-ART ASSET MANAGEMENT TOOL

Innovative Solution

The asset management tool does more than just store data. It allows asset owners to save time planning, performing and reporting inspections. Adra's decades of asset management experience was used in the development of this tool to optimise remediation expenditure and assist with planning maintenance activities.

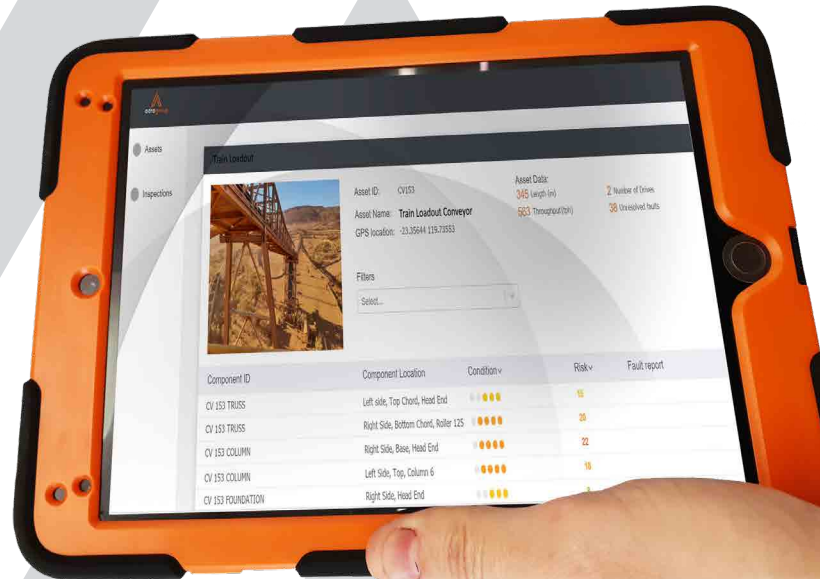

Key benefits include:

- Reduced data entry effort throughout the planning, inspection, reporting and analysis stages.
- Centralised storage of asset data for easy access by Adra Group and clients Worldwide.
- Automated generation of reports for clients.
- Algorithms based on best practices to optimise inspection steps and delegations.
- Condition trending and extrapolation for future maintenance planning and budgeting.
- Powerful custom queries for immediate insights on client asset data.
- Identification of hierarchical asset and component relationships to determine asset risk based on component condition and criticality.

Asset management tool in action

Fast, consistent and reliable assessment of asset condition in the field. The data is uploaded to the dashboard in real time.

Client dashboard

Cloud based dashboard for intuitive insights and trends on asset data, available anywhere and anytime.

Quick facts

Inspections performed using the Adra Group provided asset management tool

Results uploaded to the cloud immediately

Dashboard allows immediate access to the condition of all assets

Budget estimates generated without additional input

Client personnel can use the tool to identify and report faults

Full service or subscription only options available
